

CONDITIONS FOR ACCEPTANCE

High-calorific solvents, for recovery

EURAL code	070104*
Waste code	015030

DESCRIPTION

High-calorific solvents (such as white spirit, turpentine, thinner and aliphatic degreasers), pumpable at ambient temperature.

ADDITIONAL CONDITIONS

Parameters:

- Calorific value: > 16,000 kJ/kg
- Flashpoint: > -10°C
- pH: 4-14
- Water: < 5%
- Sediment: < 2%
- Chlorine: < 2%
- PCB: < 50 ppm
- Br, F, I: < 1000 ppm
- Acrylonitril: < 5%

General conditions:

- One phase only, in packaging of a capacity greater than 5 l.
 - No heavy metals
 - No substances that give off nauseating odours (such as amines, amides, butyric acid, mercaptans and styrene).
 - No explosive products (such as perchlorates and peroxides).
 - No lachrymatory products.
 - No radioactive products or products that release ionising radiation.
 - No waste that may form explosive mixtures or toxic fumes or cause polymerisation on incineration or due to an interaction.
 - No herbicides, pesticides or toxic waste.
 - No products that contain pathogens.
 - No oxidising products
 - No isocyanates.
 - No solvents that react with other solvents
 - No non-polymerized silicone
-
- If the water content is higher than 20%, the aqueous fraction will be charged separately.
 - If the chlorine content is higher than 0.5%, a supplement will be charged.
 - If there is a non-pumpable layer of sludge present, that sludge will be processed separately (including the drum).
