

## CONDITIONS FOR ACCEPTANCE

# PCB-containing capacitors

<b>EURAL code</b>	<b>160209*</b>
<b>Waste code</b>	<b>049002</b>

### DESCRIPTION

The PCB-containing capacitors are disconnected, dead, leak-free and visibly short-circuited. The devices may only contain, or have contained, PCB- or PCT-containing liquids (such as the typical insulation liquids Askarel, Chlorphen or Pyralène).

### ADDITIONAL CONDITIONS

#### General conditions:

- No contamination other than from PCB or PCT
- No leaking capacitors
- No capacitors that are not visibly short-circuited
- No large capacitors that will not fit in a metal open head drum

#### Packaging conditions:

- They must be packed in UN approved leakproof metal drums, which can hold at least 1.25 times the contents (PCB oil) of the device.
- There must be sufficient absorbent material in the drum to absorb 1.1 times the volume of the liquid inside the device
